

Market maker – adjust &
skew logic review

```
graph TD; A[Market maker – adjust & skew logic review] --> B[C++: MakeMarketStrategy – current implementation]; B --> C[Apr 2026 – skew vs side gating vs adjust_ticks (logging)];
```

C++: MakeMarketStrategy
– current implementation

Apr 2026 – skew vs side
gating vs adjust_ticks
(logging)

1. Inventory skew – raw bid / ask
(computeInventorySkewedRawBidAsk)

net_po from
position_state_

adjust_ticks: config +
verify only – not used in
skew

|net_po| < max_ll ?

no

yes

skew_tick_units = 0

skew_tick_units =
floor(net_po /
adjust_position)

theo_midpoint

basis

adjusted_theo = theo +
basis

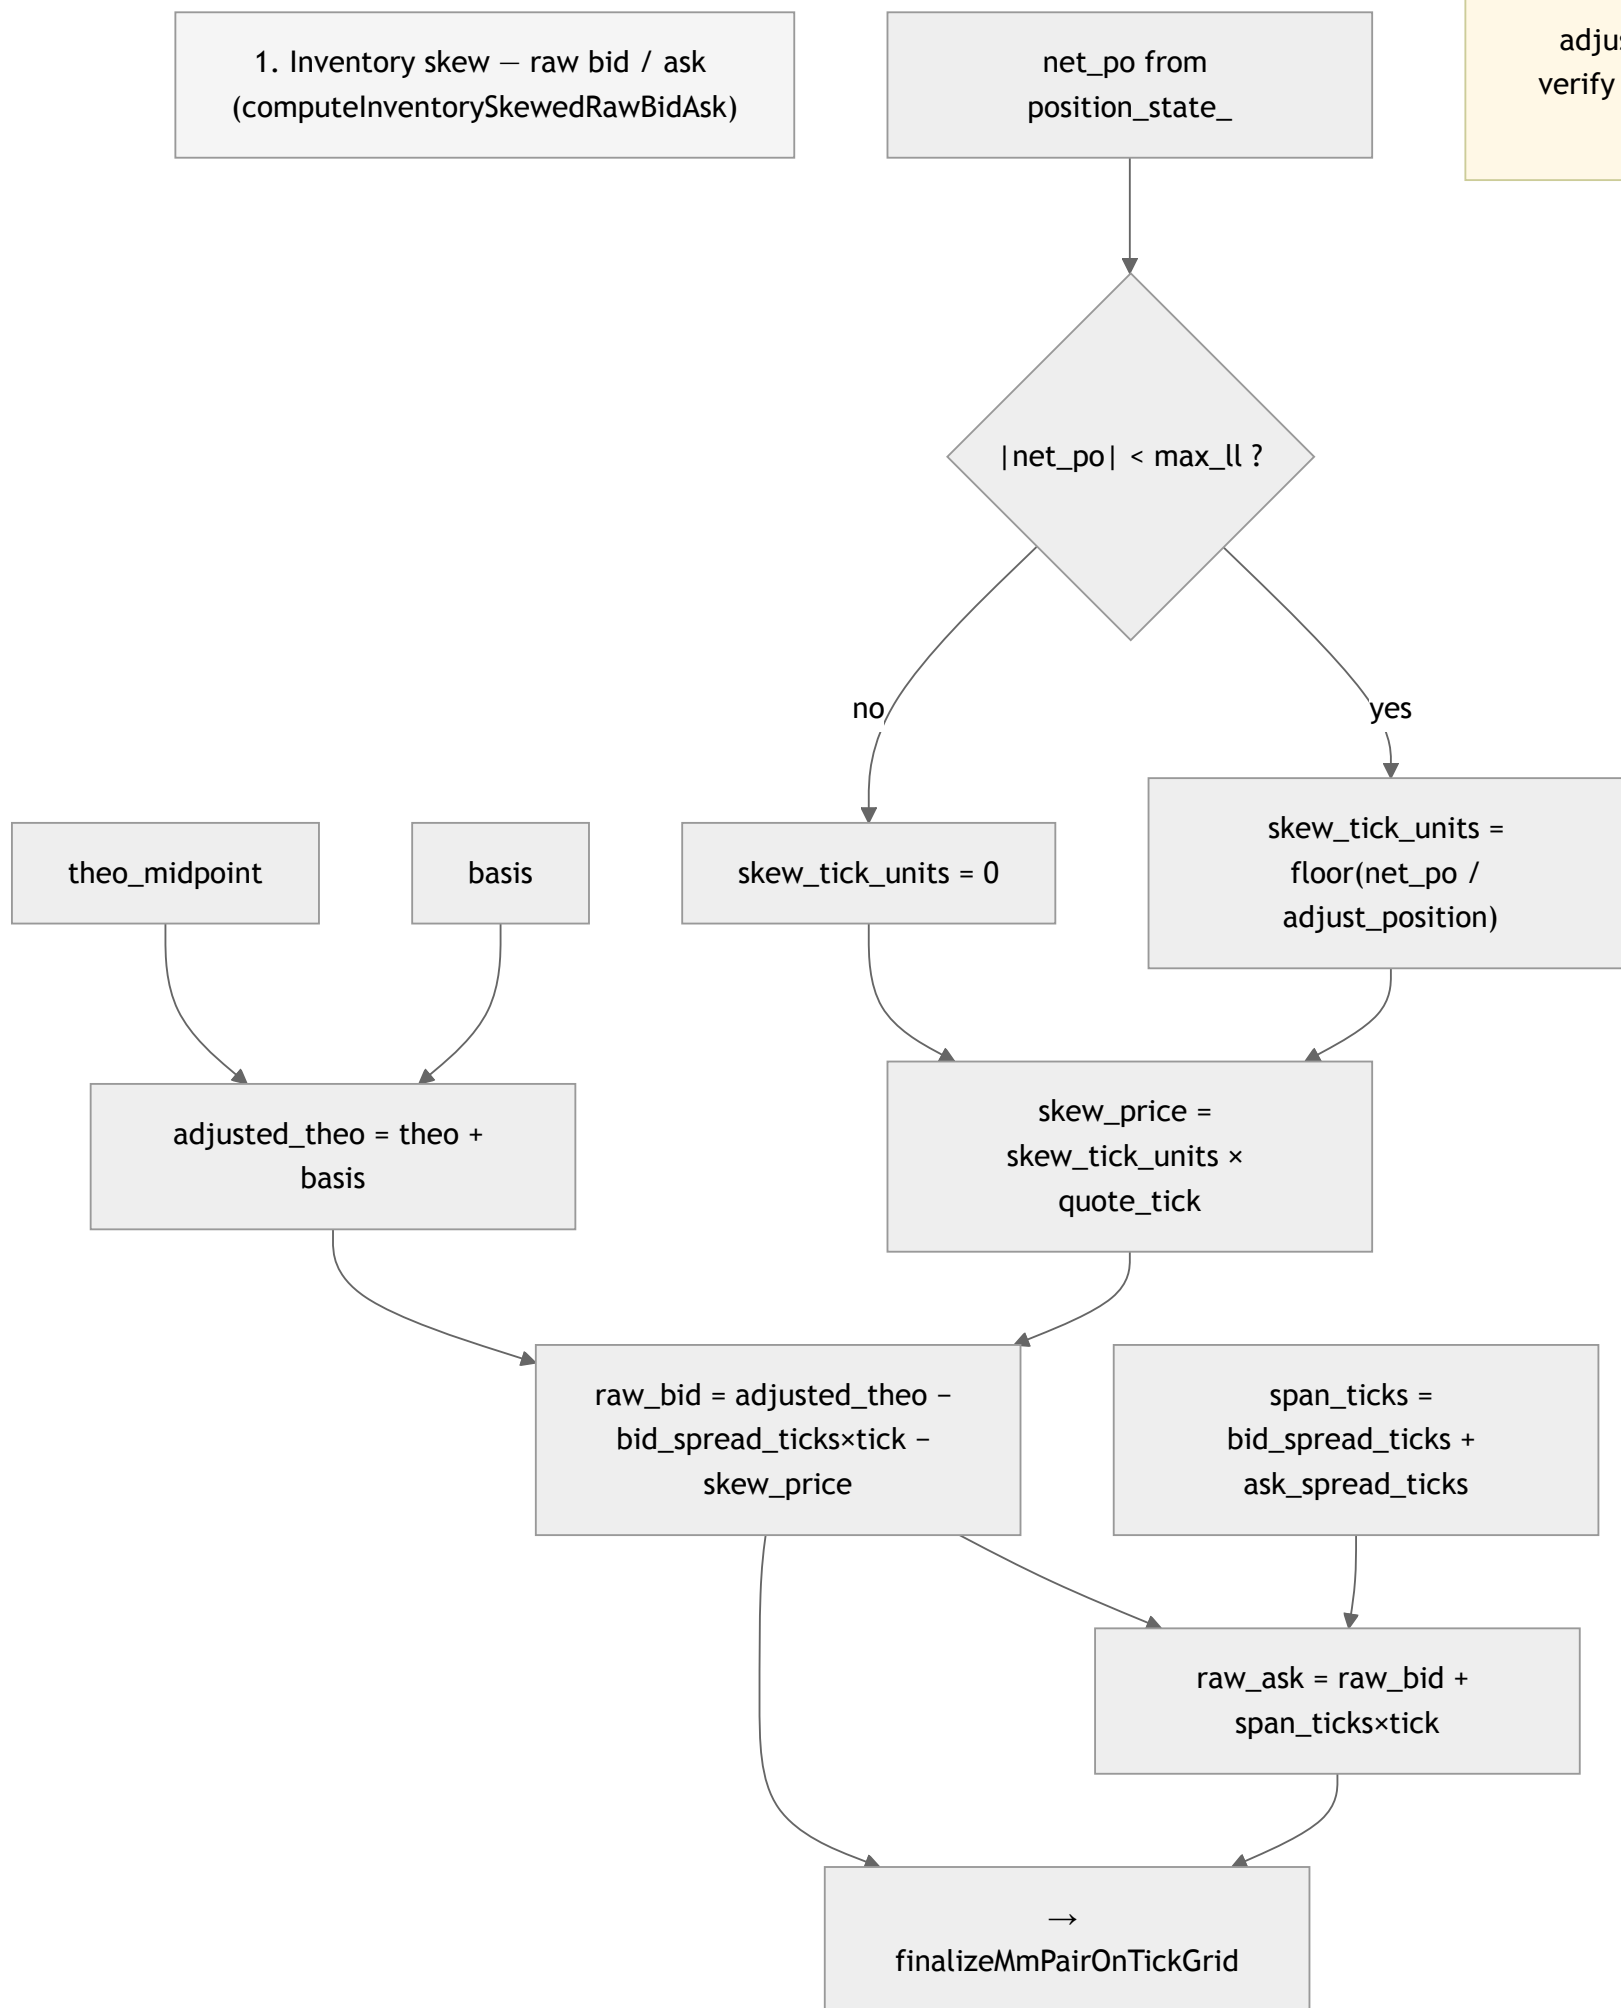

skew_price =
skew_tick_units ×
quote_tick

raw_bid = adjusted_theo -
bid_spread_ticks × tick -
skew_price

span_ticks =
bid_spread_ticks +
ask_spread_ticks

raw_ask = raw_bid +
span_ticks × tick

→
finalizeMmPairOnTickGrid

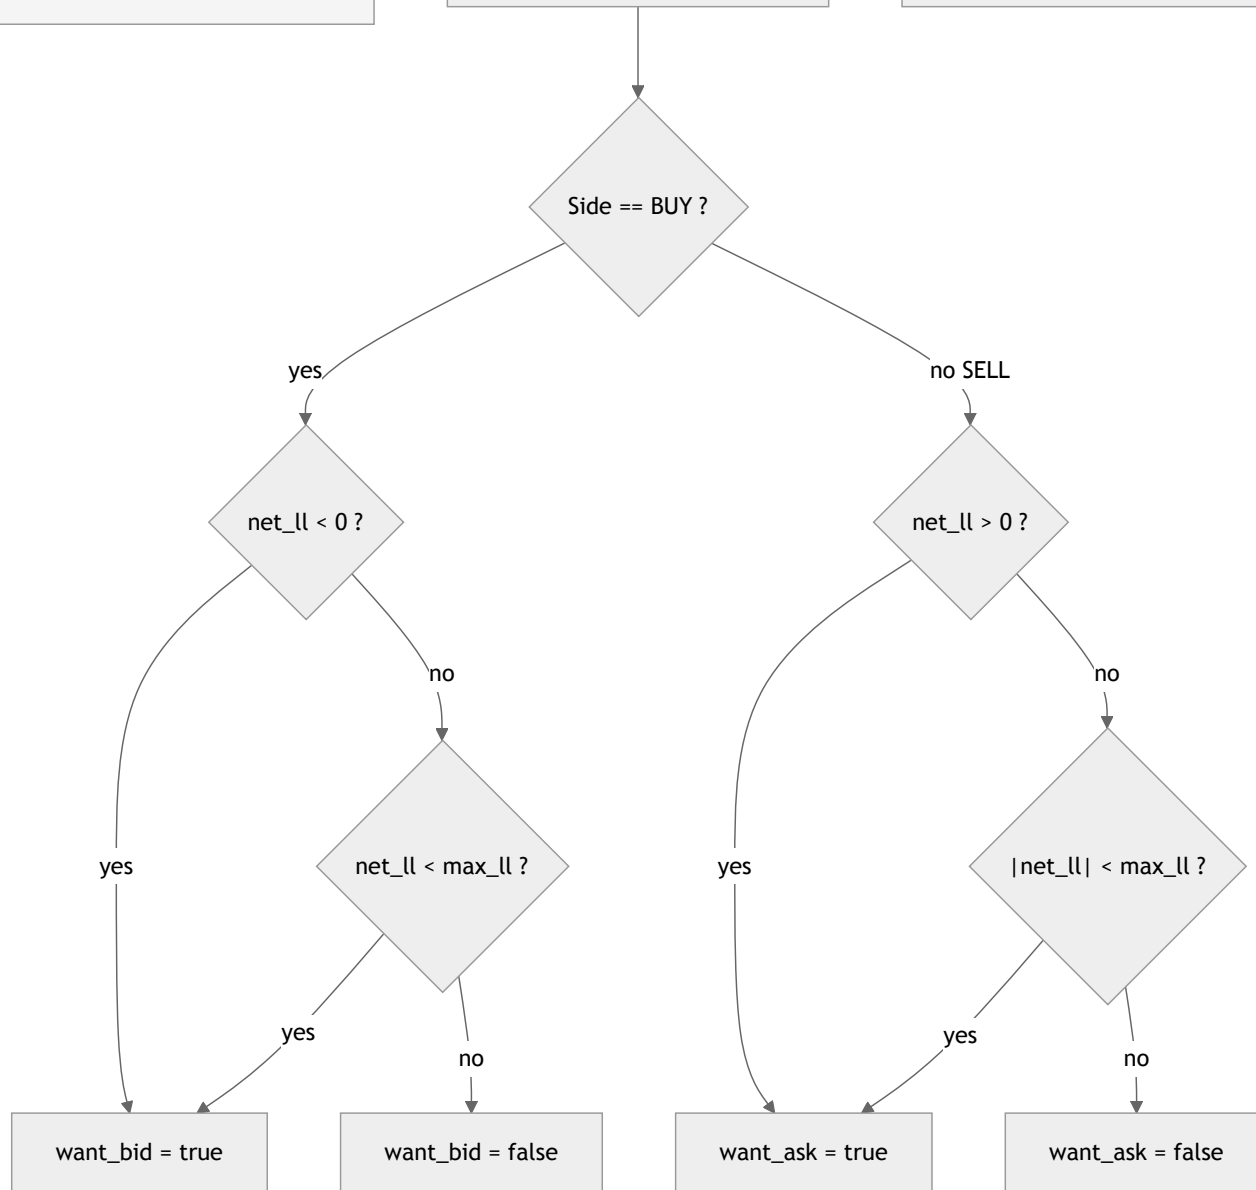

2. Side gating –
shouldQuoteSide(net vs
max_position only)

net_ll = llround net
position

max_ll = max(1,
max_position)

No order_size / resting qty
in this gate

3. runFullMmQuoteCycle —
order of operations
